

IOT6002U Assessment Brief – 001 Project Proposal

Module Code	IOT6002U
Module Title	Research Informed Professional Practice
Module Organiser(s)	Jonathan Jackson & Alex Cline
Assessment	001 Project Proposal
Weighting (%)	20%
Deadline	Friday 30 th October 2026, 23:59
Duration / Length	500 words

Assessment Outline

You are required to submit a project proposal of 500 words (excluding reference list, diagrams, appendices, and some other planning documentation) and +/- 10% of this word count should enable you to produce work that is appropriately detailed and clear.

Your proposal should be written and formatted in a manner appropriate to a professional context. Include page numbers, utilise appropriate heading styles, and an automatically generated table of contents or means of navigation.

Pseudonymise, anonymise, or redact any personally identifiable information (PII) included in your evidence throughout your work, including any appendices.

Below is a suggested structure for your submission, and word count estimates have been provided to help you ascertain the proportionate level of depth required for each section.

- 1. Cover Sheet** – include Student Name, Student ID, Module and Assessment details.
- 2. Problem Definition (150 words)**
 - A definition of the context of the work, including the organisational and technical context.
 - While your report will be read by experts, they will not necessarily be experts in your domain, and so you should ensure that the context is clear.
- 3. Project Aim and Objectives (100 words)**
 - Your project should have a singular overall aim which should ideally be expressible in a single sentence.
 - Your project should have several well-defined, numbered objectives which will typically align with milestones in your project plan.

4. Research Plan (150 words)

- Outline briefly how you will go about identifying prior work that is of relevance to your project. Where will you search? What databases, repositories, or websites? What kind of search terms will you use? How might AI tools be able to support your research (not mandatory)?
- You may wish to include supplementary tables or lists for this section which can be excluded from the word count.

5. Identification of technologies, tools and/or datasets (100 words)

- You should identify potential technologies, tools and/or datasets which could be applicable to your project.
- As a technology solutions professional, the use of tools should be justified and intentional.
- If you are using the tools because your organisation uses them or because your university materials have covered them, it is worth taking a step back and considering why these tools have been adopted or taught. You should also consider and describe alternatives.

6. Project Plan and Milestones (excluded from word count)

- This can take the form of a table of planned deadlines and a visual Gantt chart, or equivalent.
- Include any milestones that may already been met at the time of your submission.
- This section is not included in your word count.

7. Risk Register (excluded from word count)

- Produce a risk register in table format with risks identified and evaluated in terms of severity and likelihood.
- Include planned mitigations for each risk.
- If ethical or compliance review is needed before engaging in any aspects of your project, you should include this here.
- If there are organisational restrictions on talking about particular aspects of your project, you should discuss how you will navigate this risk while documenting your work.
- This section is not included in your word count.

8. References – Harvard or IEEE formats preferred

9. Appendices – if needed

Figures and appendices showing evidence of work in progress (not required) will be helpful for your supervisors, but they will not count towards the word count or be formally marked.

You should review the “Assessment Criteria” at the end of this document to understand how your work will be marked.

You must pass this assessment to be able to pass the module as a whole.

End Point Assessment (EPA) context

The project proposal submitted for this assessment is designed to lay the foundations for your final project which is assessed as part of your End Point Assessment, as visualised in the diagram below.

Submission Requirements

Your report submission **must** be a text-based report format (.docx or .pdf) and not a zip file or password protected. Any submissions which circumvent the Turnitin plagiarism checks will be marked as a fail (0).

Your submission must be as self-contained as possible and avoid relying on external links except in cases such as supporting video, live prototypes, or code repositories. When linking to external resources, ensure they are publicly available. Resources that cannot be accessed will be ignored.

Generative AI guidance

AMBER 🟡 (permitted)

Use of Generative AI (e.g., MS Copilot or ChatGPT) is **permitted** for this assessment, but not required. If using spelling or grammar assistive tools, be cautious if using any Generative AI features which rewrite non-trivial portions of your work in case your original meaning is lost or your writing ends up being incoherent. You remain fully responsible for the work you submit.

Avoid relying on Generative AI to format your references as these tools can often produce references which do not exist which will significantly undermine the credibility of your work and may be considered academic misconduct. Dedicated reference management tools such as EndNote, Zotero or Mendeley can provide more reliable support for this task.

The following are examples of potential uses of GenAI that would be considered **appropriate** for this assessment:

✓ Developing or refining a project idea	Using AI to explore possible project ideas or refine a research question, aims, or objectives. Your responsibility: You remain responsible for determining the final focus, framing, and direction of your work.
✓ Creating diagrams, visuals or infographics	Using AI to generate or refine visual representations based on your own content, analysis, or interpretation. Your responsibility: You remain responsible for the accuracy, meaning, and interpretation of any visual material submitted and should not present AI-generated data, results, or analysis as your own i.e. declare what tools you used.
✓ Checking and/or improving spelling, grammar and punctuation	Using AI as a proofreading or editing aid to identify spelling, grammar, punctuation, or typographical errors. Your responsibility: You remain responsible for ensuring that any suggested changes accurately reflect your intended meaning and do not introduce new content or ideas.
✓ Improving clarity and readability	Using AI to suggest clearer phrasing, improve expression, or enhance the readability of text. Your responsibility: You remain responsible for the meaning, argument, and interpretation presented in your work.

If you are in doubt about the appropriateness of using any specific assistive technology, please discuss with your module organiser.

For more guidance, please see <https://www.qmul.ac.uk/library/academic-skills/student-guide-to-generative-ai/>.

Late Submissions and Extenuating Circumstances

Assessments submitted after the published deadline will be marked as late and will receive a penalty, unless you have approved Extenuating Circumstances (EC).

You may submit up to seven calendar days after the deadline but a penalty of 5% of the total marks available will be applied to the assessment for each 24-hour period (or part of it) that the work is late (e.g. five marks deducted each day from a total of 100). After seven calendar days the assessment will be recorded as a non-submission and given a mark of zero.

Late penalties are applied automatically so please be aware that even submitting 10 seconds late (e.g. 23:59:10) will trigger a late penalty.

For more information, you can find the latest Assessment Handbook and Extenuating Circumstances policy via the QMUL policies page here: <https://www.qmul.ac.uk/governance-and-legal-services/policy/policies-by-category/>

Knowledge, Skills, and Behaviours (Apprenticeship v1.2)

You should plan how your final project will enable you to evidence the **project-mapped Knowledge, Skills, and Behaviours (KSBs)** as part of End Point Assessment. The project-mapped KSBs will be available on QM+.

Assessment Criteria

Criteria	0-29 (F) Not successful	30-39 (E) Below required standard	40-49 (D) Pass	50-59 (C) Satisfactory	60-69 (B) Good	70-79 (A) Excellent	80-100 (A+) Outstanding
Minimum pass requirement	Report must be submitted in text format, such as .docx or .pdf, so that Turnitin plagiarism checks are not circumvented.						
Problem Definition, Aim and Objectives (25%)	Problem definition, aim, and objectives are missing, incoherent, or not relevant to a digital and technology solutions project.	Problem context is attempted but unclear or poorly scoped. Aim and objectives are present only in limited form, with significant omissions or weak alignment to the problem.	Problem context is described in a basic but understandable way. A plausible aim and some objectives are provided, though scope, rationale, or alignment may be limited.	Problem context is mostly clear and relevant. The aim is appropriate, and objectives are generally defined and aligned with the proposed project, with some lack of precision.	Problem context is clear, relevant, and well scoped. The aim is focused, and objectives are specific, coherent, and logically connected to the problem and proposed project outcomes.	In addition to B-grade criteria: The problem is justified through a strong links to the organisational and technical context. Aim and objectives are precise, measurable where appropriate, and form a clear foundation for the project plan.	In addition to A-grade criteria: The problem definition is compelling, insightful, and professionally framed. Aim and objectives demonstrate mature judgement, strong feasibility awareness, and potential value beyond the immediate module context.
Research Plan (25%)	Research plan is missing, incoherent, or unrelated to the proposed project.	Research plan is attempted but very limited, with unclear sources, search strategy, or connection to the project.	Research plan identifies some relevant sources or search approaches, but coverage, rationale, and connection to project decisions are limited.	Research plan is appropriate and mostly clear, identifying relevant source types, search locations, and indicative search terms, with some explanation of how findings will inform the project.	Research plan is clear and well structured, with relevant sources, databases, repositories, search terms, and selection rationale. It explains how prior work will inform elements of the project.	In addition to B-grade criteria: The plan shows a systematic and critically informed approach, including appropriate evaluation of source quality, relevance, and potential limitations.	In addition to A-grade criteria: The research plan is sophisticated, targeted, and professionally credible, demonstrating strong awareness of current practice, evidence quality, and how research will shape project decisions.

Assessment Criteria

Criteria	0-29 (F) Not successful	30-39 (E) Below required standard	40-49 (D) Pass	50-59 (C) Satisfactory	60-69 (B) Good	70-79 (A) Excellent	80-100 (A+) Outstanding
Identified tools and technologies (25%)	Tools, technologies, or datasets are missing, inappropriate, or unrelated to the proposed project.	Tools, technologies, or datasets are listed but poorly explained, weakly justified, or unsuitable for the problem context.	Some plausible tools, technologies, or datasets are identified, but justification is basic and alternatives or constraints are not clearly considered.	Relevant tools, technologies, or datasets are identified and partially justified in relation to the project aim, with some consideration of suitability, constraints, or alternatives.	Tools, technologies, or datasets are clearly identified and well justified. Selection shows appropriate awareness of project requirements, organisational context, feasibility, and relevant alternatives.	In addition to B-grade criteria: Selection is critically justified using clear criteria such as functionality, integration, security, data governance, maintainability, or professional practice.	In addition to A-grade criteria: Technology choices are exceptionally well reasoned and demonstrate mature professional judgement, including nuanced consideration of trade-offs, risks, constraints, and future scalability.
Project Plan and Risk Register (25%)	Project plan and risk register are missing, incoherent, or not meaningfully linked to the proposed project.	Project plan or risk register is attempted but incomplete, unrealistic, or lacking milestones, risk evaluation, or mitigation strategies.	Basic project plan and risk register are provided, with some relevant milestones and risks identified. Timescales, dependencies, severity, likelihood, or mitigations may lack clarity.	Project plan is mostly realistic and includes appropriate milestones. Risk register identifies relevant risks with some evaluation of likelihood, severity, or planned mitigations.	Project plan is clear, realistic, and logically sequenced, with appropriate milestones and deliverables. Risk register is well developed, with relevant risks, severity, likelihood, mitigations, and ethical or compliance issues where applicable.	In addition to B-grade criteria: The plan demonstrates strong project management judgement, including dependencies, contingencies, and well prioritised risks aligned with project objectives.	In addition to A-grade criteria: The project plan and risk register are of a professional standard, with comprehensive sequencing, realistic contingency planning, and well evidenced prioritisation.
